

ETC

ERGONOMIC TECHNOLOGIES CORPORATION

- Ergonomic Results within Reach

Overview of ETC Services

INTRODUCTION

The underlying goal of ETC's consulting services is to improve user interface for the purpose of optimizing performance and reducing error and injury potential. The application of an ergonomics process can be managed through a consistent process that addresses physical, environmental and psychosocial issues. Physical factors may include working postures, user anthropometry, workstation and equipment layout, workstation design and lighting just to name a few. Environmental factors deal with air quality, temperature, and noise while psychosocial factors include items such as workload, task characteristics, work organization and psychological stress.

EDUCATION AND TRAINING

- Awareness Training for Managers and Supervisors
- Industrial Ergonomic Training for Engineers
- Ergonomic training for safety/health/medical personnel
- Employee training
- Office Ergonomic Training
 - Train-the-Trainer
